MINI PROJECT REPORT

# Zepto Clone

An online grocery ordering and delivery system

## 1. Topic

Zepto Clone is a simple online grocery store. Customers browse products by category, add them to a cart and place an order. Each order stores the items bought and their quantities, and is assigned to a delivery partner who delivers it. The admin can add products, update stock and change an order's status from Placed to Delivered.

## 2. Frameworks and tools used

| | | | |
|---|---|---|---|
| **Front end** | HTML, CSS, JavaScript | **Back end** | Node.js with Express.js |
| **Database** | MySQL (via XAMPP) | **Connector** | mysql2 (npm package) |
| **Tools** | phpMyAdmin, VS Code | **Server** | Runs locally on localhost |

## 3. Relational Model Schema

**key** Primary key *attr* → TABLE Foreign key

**CUSTOMER**

| **customer_id** | name | phone | address |
|---|---|---|---|

**CATEGORY**

| **category_id** | name |
|---|---|

**PRODUCT**

| **product_id** | name | price | stock | *category_id* → CATEGORY |
|---|---|---|---|---|

**DELIVERY_PARTNER**

| **partner_id** | name | phone |
|---|---|---|

**ORDERS**

| **order_id** | *customer_id* → CUSTOMER | *partner_id* → DELIVERY_PARTNER | order_date |
|---|---|---|---|

| total_amount | status |
|---|---|

**ORDER_ITEM**

| ***order_id*** → ORDERS | ***product_id*** → PRODUCT | quantity | item_price |
|---|---|---|---|

ORDER_ITEM comes from the M:N relationship CONTAINS (one order has many products; one product is in many orders). The table is named ORDERS because ORDER is a reserved word in SQL.

## 4. Main features

**Browse and order**
Products listed by category; customer places an order from the cart.

**Auto stock update**
A trigger reduces PRODUCT.stock when an ORDER_ITEM row is inserted.

**Order tracking**
Status moves Placed → Packed → Out for delivery → Delivered.

**Admin reports**
JOIN and GROUP BY queries for best-selling products and daily sales.
